Contribution of American Law and Lawyers to Law, Law Practice and Legal Education in Korea

American law has been instrumental in nurturing the democracy and market practices of South Korea, a country generally thought to be a civil law country nurtured in the German-Japanese legal traditions, and the roles of American lawyers in such development have not been discussed explicitly. In this session, the elements of American law and how they facilitated the development of Korean law, law practice and education will be dissected and presented to the audience by the practitioners of cross-pollination themselves, citing their best practices. Attendees will be able to learn the comparative-legal skills necessary for international lawyering practices and education in foreign jurisdictions.

Use of Artificial Intelligence in Legal Services in Korea/Asia (Law Practice Management)

Asia was the forum where a machine beat its creators in the game of go, awakening the world to the advent of suprahuman artificial intelligence and where futuristic narratives on AI have been put to the most philosophical and emotional uses such as care of seniors, education of children, etc. Use of AI in legal services has been also most innovative as this workshop will show. On top of that, we will train attendees on unique ethical issues arising out of delivery of legal services through or using AI, especially at the crossroads of professional legal ethics and AI & ethics.

Cryptocurrency: The Problem Child Tamed?

CJ Law Hall, B1F Veritas Conference Hall

The first cryptocurrency transactions occurred almost nine years ago. Over that period, the value of such currency has exhibited great volatility, ranging from 1 cent per coin to USD 17,900. Nevertheless, governments around the world have been slow to respond and implement regulatory regimes. Not only are buyers of coins vulnerable to this astonishing variability but they have been left very susceptible to criminals hacking crypto exchanges, draining crypto wallets and infecting computers with cryptocurrency-stealing malware. In addition, while cryptocurrency transactions are being utilized for legitimate business purposes, they have also lent themselves to money laundering and terrorist financing. This session will explore what regulators in the United States and South Korea are doing to take control of this wild west atmosphere, including promulgating formal regulations, conducting enforcement actions, and issuing subpoenas, document requests and cease-and-desist orders. The session will also explore the potential civil and criminal penalties that could soon become a core focus of regulatory enforcement in the cryptocurrency world, particularly in the area of anti-corruption, anti-money laundering and economic sanctions violations. Finally, the session will touch on what remedies, including arbitration, may be available to buyers to recover stolen cryptocurrency.

The Continuing Evolution of the U.S. • Republic of Korea Free Trade Agreement and the Impact on Regional and Trans-Pacific Investment and Technology Transfer

CJ Law Hall, B1F Conference Libertas Hall

The free trade agreement between the United States and the Republic of Korea promised to join not only two of the world's largest trading partners but also had the potential for significant impact on geopolitical stability, territorial expansion in the South China Sea and the Rule of Law on many issues including intellectual property rights and human rights. This panel will examine the evolution of KORUS up to and including the current treatment of the FTA given political realities in South Korea and in the U.S. under the Trump Administration.

The Emergence and Growth of Fintech in Asia – Comparative study of regulations in key jurisdictions

CJ Law Hall, B1F Veritas Conference Hall

Asia is expected to lead the world into the next generation of financial technology innovation. Data suggests that

North Korea: from rogue state to economic partner?

CJ Law Hall, B1F Conference Libertas Hall

One year ago, in June 2017, Otto Warmbier died only six days after having been repatriated in a comatose state. In November 2017, the US government restored North Korea to the list of state sponsors of terrorism. For several weeks, the Korean peninsula seemed on the brink

investors poured USD 3.85 billion into FinTech companies in Asia in 2017. According to the World Bank, three out of the top five economies with the most business-friendly environments, namely Hong Kong, Singapore, and Korea, are in Asia.

The FinTech industry in Asia is largely driven by start-ups. Governments in Asian countries are taking initiatives to encourage and support FinTech start-ups. In 2015, the federal bank of India i.e. the Reserve Bank of India issued 21 banking licenses to companies wishing to leverage technology to provide financial services to the unbanked and underbanked. Subsequently, in June 2016, the Government of India launched the 'Start-Up India initiative', which includes a USD 1.5 billion fund for start-ups. Hong Kong recently introduced an Innovation and Technology Venture Fund. Singapore is working towards ensuring access to suitable financing for nascent enterprises domiciled in the city. In South Korea, the Financial Services Commission established the FinTech Center which intends to catalyze FinTech innovation by supporting domestic startups and companies.

In light of the above said developments and growth of the FinTech industry in the Asian countries, we see great opportunities for attorneys and their firms to provide specialized legal services to emerging start-ups.

The panel will focus on the following three pertinent issues:

1. Role that regulations on FinTech can play to make the Asian economy dominant in retail banking services.
2. Potential Investment opportunities in the FinTech companies in Asia and related legal concerns.
3. The specialized legal advice and services that attorneys and their firms may provide to emerging start-ups in the FinTech industry in Asia.

Gun Kim, Yulchon LLC, Seoul, South Korea
Kenji Hirooka, Anderson Mōri & Tomotsune, Tokyo, Japan
Nicholas Hanna, K&L Gates LLP, Singapore
Samuel Yim, Kim & Chang, Seoul, South Korea

of war and Northeast Asia held its breath. The winter Olympic games in Pyeongchang contributed to ease the tension and soon after a historic meeting was held in Singapore between the leaders of the US and North Korea. Although nothing concrete was decided at the meeting, it marked the beginning of a new phase of optimism, with people cautiously exploring the possibilities of future economic cooperation with the DPRK.

In this context, it is worth examining what future economic cooperation between North Korea and its capitalist neighbors may look like. Our panel of experts will discuss the legal framework prevailing in North Korea, past experiences of doing business with North Korea, and the legal and other pitfalls to avoid when negotiating with North Korean authorities. Although it is too early to say whether the relationship will markedly improve, a review of the current situation and what has been accomplished so far will be useful to anyone with an interest in the geopolitical situation on the Korean peninsula and its legal dimensions.

TECHNOLOGY TRACK

Compliance 3.0: Tying Technology to Advance Legal and Accounting Investigations to the Next Level
CJ Law Hall, B1F Veritas Conference Hall

Traditional Compliance work is now being supplemented with technology advancements, such as AI and Data Analytics, to help organizations not only save costs but also build in-house sound capabilities for other business units. In industries, such as the pharmaceutical industry, we have seen companies develop technology platforms to determine habits, patterns, and predictive analysis for its employees to aid in internal investigations, further assisting the legal framework of investigations. There is no doubt that internal Compliance abilities are evolving beyond adhering to the company code of conduct. We have a panel of legal and investigation experts assembled to share their experiences both in advising firms and also in executing investigations when technology has played an instrumental role in the outcomes' success. Also, our experts will share their thoughts on what's next for this exciting change in a discipline that continues to have the regulators' attention.

INVESTMENT TRACK

Trends and Challenges for Indian and Chinese Outbound and Inbound Investments
CJ Law Hall, B1F Conference Libertas Hall

This program will focus on the key trends and challenges relating to making investments in India and China, as well as making investments from India and China. Whether it be setting up a subsidiary, a joint venture, making an acquisition, undertaking a venture capital or a private equity investment. Panelists will discuss the peculiar legal issues that emanate from, and are critical to such transactions. Issues such as exchange controls, antitrust, enforceability of investment agreements, and dispute resolution mechanisms that must be borne in mind while structuring and negotiating such transactions will be discussed, and practical tips provided on how best to handle such issues, and mitigate risks for clients.

What's next for the sharing economy in Asia? Trends in regulation of P2P digital platforms
CJ Law Hall, B1F Veritas Conference Hall

Just 8 or 9 years ago there was virtually no sign of Airbnb, Uber, Didi, or any of the myriad "sharing economy" platforms that, in vastly expanding connectivity between sellers and consumers, have reshaped whole swathes of economic activity. Our panel will look at the shifting legal landscape for P2P online and app-driven platforms in Asia, but focusing on "disruptors" in transport and hospitality. Platforms in every sector – retail (eBay, Alibaba), services of all kinds, publishing, and so on – tend to share certain kinds of issues, such as data privacy. However, in Asia as elsewhere, ride sharing and home sharing tend to involve special constraints, and sometimes competing perspectives – policymakers' views, existing industry structures, consumer convenience and demand. Greenlighting a rideshare app in 2015, the then mayor of London observed, "You can't disinvent this thing." Whether or how to regulate is the question. The panel will look at the shapes and types of regulation governing ride and home sharing platforms in Asia, and consider the directions of possible change. Broader aspects will be considered as well, including risk allocation (liability; insurance) and competition law, bearing on P2P lending and other areas.

Recent Trends and Legal and Other Developments in Technology M&A in Asia
CJ Law Hall, B1F Conference Libertas Hall

In Asia, we have seen increasing M&A activities, and among others, one of the hottest sectors is the technology sector, where we see large volume and increasing numbers of transactions. Within Asia, we have seen more transactions in China where Alibaba, Tencent and Baidu are the active players in the market, and we will discuss hot areas and legal issues for technology M&A transactions in China, technology dilemma in Chinese inbound business and technology focus in Chinese outbound investment. Also, in South Eastern Asian Countries, in particular, Singapore which is the financial district of the region, we have seen increasing activities of startups, in particular, Fintech-related companies, and we will discuss supportive initiatives such as the regulatory sandbox for FinTechs in Singapore, and common technology M&A structures in Singapore, including ICOs as an alternative to VC funding, and related legal challenges. Further, we have seen increasing technology M&A transactions in other Asian countries, such as in India and South Korea, and we will discuss hot sectors, key drivers and legal and other challenges in both inbound and outbound technology M&A

DISPUTE TRACK INVESTMENT TRACK

When Money Is Not Enough: Ensuring Equitable Relief Is an Option in Arbitrating Technology Agreements
CJ Law Hall, B1F Veritas Conference Hall

What happens when a contracting partner abuses a technology license or other intellectual property agreement? Will damages be enough? Or do you want to ensure that you will have options to pursue equitable relief under an international arbitration agreement? Does your arbitration clause possibly preclude seeking equitable relief in certain jurisdictions? Often times, the ability to stop infringing conduct is as important, if not more so, than eventually recovering damages. Do your arbitration clauses provide adequate abilities to do so? This program will focus on these questions as our panel explores best practices for ensuring that your international arbitration clause includes adequate options for pursuing equitable remedies and how best to enforce such equitable options. Panelists will discuss their experiences in negotiating provisions for equitable relief in arbitration clauses and in seeking equitable relief in conjunction with arbitration proceedings.

The Role of Innovation and Technology in Competition Law and Enforcement in East Asia
CJ Law Hall, B1F Conference Libertas Hall

As the global economy is transformed by new technologies and innovations, it triggers new thinking and presents new challenges to competition law and its enforcement. These new challenges have potentially major implications for cartel investigations, competition analysis in merger review, and even the very language of competition laws. Both China and South Korea are studying potential major revisions to their competition laws and enforcement regimes, while Japan has recently substantially restructured its competition law regime. How to both foster competition and encourage innovation is a common theme in these efforts.

This panel of senior enforcers, leading scholars and expert practitioners will discuss the actual and potential changes in these 3 important jurisdictions and their likely impact, particularly on merger control and antitrust investigations procedurally and substantively, as well as potentially on innovation. The panel will share their insights on the optimal statutory and procedural frameworks to evaluate innovation effects in mergers, the analytical tools in competition law generally, and effective constraints on administrative action and judicial review.

Corporate Cyber Fraud: Global Strategies to Enhance Recovery Efforts in The Event of Asset Theft
CJ Law Hall, B1F Veritas Conference Hall

2017 was a record year for reported incidents of cyber hacking or phishing affecting global corporations, and the rate of attacks is expected to increase. Despite persistent media coverage surrounding the massive data breaches of major companies like Equifax, Yahoo!, and Sony, phishing attacks have remained a principal risk to companies. Though hackers routinely defeat company security protocols to gain access to accounting and payment systems, it takes most businesses more than 195 days to detect a breach on their network, by which time the stolen funds are usually long gone. Asia's major financial hubs and offshore locations, such as the British Virgin Islands and the Cayman Islands, are among the most common destinations for these stolen funds. This type of fraud has cost businesses billions in recent years, including in several high-profile cases where the consequences have gone beyond financial loss.

This panel session will cover some of the steps companies and their advisers can take to maximize the odds of retrieving stolen assets, including coordinating with local and international law enforcement, conducting a forensic investigation and tracing and freezing of assets.

Understanding CFIUS Review Process and "National Security" Concerns: What Every Cross-Border M&A Lawyer Must Know about the CFIUS Review Process and Potential Risks When Representing Non-US Buyers of U.S. Businesses and Assets
CJ Law Hall, B1F Conference Libertas Hall

Back in March, President Trump blocked one of the largest transactions in the high-tech space -- Broadcom's bid for Qualcomm - -on national security grounds, after rejecting a Chinese Government-backed private equity firm from acquiring a U.S. chipmaker, Lattice Semiconductor. The Obama administration also used CFIUS review to block a number of foreign acquisitions of US businesses on national security grounds.

In this session, you will learn about the CFIUS review process and the meaning of "national security" to help you navigate through the process that has always been something of a "black box." CFIUS practitioners from leading U.S. law firms will provide in-depth analysis of recent blocked transactions and discuss the recent legislative development to expand the scope of transactions that are subject to CFIUS review.

How U.S. Tax Changes Will Affect U.S.-Asian Transfers of Investment and Technology

CJ Law Hall, B1F Veritas Conference Hall

The U.S. tax law in 2018 dramatically changed the U.S. taxation of foreign investors in U.S. businesses and of foreign technology companies with U.S. subsidiaries. Likewise, the U.S. tax law in 2018 dramatically changed the U.S. taxation of U.S. investors in foreign businesses and of U.S. technology companies with foreign subsidiaries. The panelists will review these 2018 U.S. tax changes, and how they are likely to change the flows of investment and multinationals' spending on developing technology, between the U.S. and Asia. The new U.S. tax rules will affect the advice that attorneys will give on structuring or restructuring cross-border investments, presenting opportunities but potential pitfalls.

Recent Developments on the F/RAND Debate: A Comparative Analysis of US, EU and Asia

CJ Law Hall, B1F Conference Libertas Hall

Over the last decade, issues related to the commitment to license standard essential patents (SEPs) on fair, reasonable and non-discriminatory (F/RAND) terms have received tremendous attention from the courts and antitrust agencies around the world. Courts and competition authorities in numerous jurisdictions have made important decisions in recent cases on issues related to F/RAND rates, licensing terms, and injunctive relief.

This panel will compare and contrast policies and recent court decisions in jurisdictions including US, Europe, and Asia. The program will bring together attorneys and economists to provide a detailed, comparative view of the enforceability of licensing and contractual limitations in more restrictive jurisdictions that could undermine global strategies in business licensing or distribution.

CLE Information	

The ABA directly applies for and ordinarily receives CLE credit for ABA programs in AK, AL, AR, AZ, CA, CO, CT, DE, GA, GU, HI, IA, IL, IN, KS, KY, LA, ME, MN, MS, MO, MP, MT, NH, NJ, NM, NV, NY, NC, ND, OH, OK, OR, PA, SC, TN, TX, UT, VT, VA, VI, WA, WI, and WV. These states sometimes do not approve a program for credit before the program occurs. This course is expected to qualify for 14.5 CLE credit hours in 60-minute states, and 17.4 credit hours in 50-minute states This transitional program is approved for both newly admitted and experienced attorneys in NY. Attorneys may be eligible to receive CLE credit through reciprocity or attorney self-submission in other states. For more information about CLE accreditation in your state, visit our [meeting website](#) or contact Thomas.Happell@americanbar.org.
